FOOTNOTES:

CW = Count Week and identifies a species seen during Count Week inside the Count Circle, but which was not seen on Count Day. Count Week includes the three days before and the three days following Count Day.

# denotes a species which was recorded between 1914 and 1967, and has not been recorded since.

Species ?, normally does not add another species, but the individuals are added to the total. The same is true when additional races for forms of a species are seen, such as with the Dark-Eyed Juncos. They only count as one species.

A species total which is outlined

**97**

was the largest number of individuals seen on any Christmas Bird Count in the world that year.

**A number in BOLD type is the highest number ever counted for that species on our count.**
